\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Respondents were classified as needing alcohol use treatment if they met the Diagnostic and Statistical Manual of Mental Disorders, 5th edition (DSM-5) criteria for an alcohol use disorder or received treatment for alcohol use at a specialty facility (i.e., drug and alcohol rehabilitation facility [inpatient or outpatient], hospital [inpatient only], or mental health center). Questions on virtual substance use treatment were added in Quarter 4 of 2020. Estimates in this table do not include data from these questions. Data on virtual substance use treatment are included at the end of this section. See the *2020 National Survey on Drug Use and Health: Methodological Summary and Definitions* for details.

NOTE: Alcohol use disorder (AUD) estimates in 2020 are based on criteria from the Diagnostic and Statistical Manual of Mental Disorders, 5th edition (DSM-5). AUD and related estimates are not comparable between 2020 and prior years of NSDUH, because prior years' estimates were based on DSM-IV criteria. The 2020 estimates reflect additional methodological changes for the 2020 NSDUH. Due to these changes, significance testing between 2020 and prior years was not performed. See the *2020 National Survey on Drug Use and Health: Methodological Summary and Definitions* for details on these changes.

Definitions: Measures and terms are defined in Appendix A.
